# 1. Release Features

## Overview

The following new features and modifications have been added in this release.

- *Added the ability to view a history of HealthLink Client profile changes, so that HealthLink can see how a customer's profile changes over time. [AHMS-65]*
- *Added the capability for a HealthLink Client installation to open local Windows firewall ports, so that our Forms Solutions can operate without requiring manual intervention. [AHMS-134]*
- *Added a hashed connection password for an HMS EDI to the hms\_config.xml file, so that HMS can be set up during a 'hands free' deployment initiated EMR. [AHMS-144]*
- *Added a web service that allows profile information to be retrieved. [AHMS-156]*
- *Added a new type of HMS certificate that is used by the CareConnect portal server to authenticate its users. [AHMS-215]*
- *Added the ability for Customer Support to be notified if a site is reinstalling the HealthLink Client so that HealthLink can ensure the site's service is re-established correctly. [AHMS-243]*
- *Added the Customer Support access to the latest collection of site profiles to help with the reinstallation of the HealthLink Client. [AHMS-247]*
- *Added the Profile Loader Web Service WSDL file to the installation of the HealthLink Client, so that it does not have to be deployed manually. [AHMS-281]*
- *Updated the version number to 6.6.5 in the HealthLink Client and associated applications. [AHMS-257]*
- *Added HMS Installation support for Windows users who do not have wmic installed. [AHMS-322]*
- *Package IIS 8.5 Messaging release. [AHMS-462]*
- *Updated AU Forms max sync attachments default to 5mb. [AHMS-476]*
- *Added 'Silent Install' One Time Password (OTP) capability. [AHMS-479]*
- *Implemented GCS and Tomcat performance updates. [AHMS-495]*
- *Updated Forms and CareSelect messages to allow EMR Web services to receive Alias. [AHMS-480]*

## 2. Resolved Issues

### Overview

The following outstanding issues have been addressed in this release.

- *Fixed the way that profiles are stored at HealthLink, so that the full history of HMS profiles is available. [AHMS-74]*
- *Modified the validation of RSD02NZ messages that contain HL7 2.4 RF1-3.1 code "DNA" ["Did Not Attend"], so that these messages are not rejected by the HealthLink Client. [AHMS-95]*
- *Modified the handling of the HL7 MSH.4 field, so that an alias can be specified (in 4.1^4.2 format) and is not overridden with an EDI. [AHMS-114]*
- *Fixed the storing of non-default WSDLs in the HealthLink Quantum directory, so that an upgrade to a newer HealthLink Client does not remove custom WSDLs. [AHMS-122]*
- *Removed the Test Connection feature in the HealthLink Client installer because it did not work as expected. [AHMS-161]*
- *Modified the RSDAU message type to allow more than one Next of Kin segment, so that these messages are not rejected by the HealthLink Client. [AHMS-189]*
- *Fixed a problem with the HealthLink Client not placing NACK messages in the correct folder when receiving messages from a 'third-party' web service. [AHMS-198]*
- *Fixed a problem with the start menu item not being created properly during the silent installation of the HealthLink Client when running in hands free unattended mode. [AHMS-219]*
- *Modified the interactions between HealthLink Clients running on Windows and Mac, so that Genie running on Mac OSX is still able to use Aduro forms. [AHMS-259]*
- *Updated the HealthLink Client config.xml file to include a timestamp, so that EMR vendors can determine when changes were last made to a site's configuration. [AHMS-260]*
- *Fixed an issue on Mac OSX, where the HealthLink Client system profile was being updated with default values, when the Quantum service was restarted. [AHMS-318]*
- *Switched off some of the HealthLink Client installer screens related to loading profiles because these features have not been fully completed. [AHMS-326]*
- *Fixed the infinite loop issue when submitting a file that is too large for Forms Director. [AHMS-457]*
- *Fixed the 502 Web Proxy Error when re-launching Forms. [AHMS-473]*
- *Fixed the attachment file size validation message so that it does not display over previously attached file details. [AHMS-525]*
- *Updated the ESA g2 key-store. [AHMS-474]*

---

## 3. Enterprise Solution

### Overview

The following changes to our Enterprise Solution have been made in this release.

- *Fixed a problem so that sending a message with an empty file name no longer detrimentally affects the Breast Cancer route. [AHMS-154]*
- *Fixed a problem with message duplication for NSW Health, so that there are no confusions on the recipients' side about which message is the right one. [AHMS-203]*
